FOR OWNERS AND OFFICE MANAGERS

Your team may already use AI you never approved.

How to find the AI your team already uses, and 5 steps to put one rule around it.

WHAT THE DATA SAYS

78%

of AI users bring their own AI tools to work. At small and medium-sized companies, it’s 80%.

Microsoft and LinkedIn, 2024 Work Trend Index.

Usually nobody said what's allowed.

People pick their own tools to get through the week. Then client notes, quotes, and emails can end up in free accounts nobody chose.

> Do you know which AI tools your team uses today?

SHADOW AI CHECK

01

Ask, then check

Send a no-blame message: what AI tools do you use, and for what? Then check your admin console, card statements, and browser extensions.

> Try this: start with the connected-apps list in Google Workspace or Microsoft 365.

SHADOW AI CHECK

02

Sort the tools

Every tool gets one answer: yes, yes with limits, or no.

> Try this: one line per tool, with an owner.

SHADOW AI CHECK

03

Write the one-page rule

Approved tools, the limits, what never gets pasted, and who to ask.

> Try this: fill in the blanks, then pin it where people work.

04

Tell them what they can do

Publish the approved list, not just the bans, and a fast way to ask for more.

> A ban with no alternative pushes tools out of sight.

SHADOW AI CHECK

05

Recheck monthly

Ten minutes on the calendar. New tools appear constantly.

> Try this: re-run the connected-apps check and ask what's new.

Your Shadow AI check:

- [ ] Asked and checked
- [ ] Tools sorted
- [ ] One-page rule
- [ ] Team told what's OK
- [ ] Monthly recheck
