Who holds the keys? A 5-step human- in-the-loop check.

STEP 01 / 05

Draft vs. decide

Sort every AI task: AI drafts and a human decides — or AI decides and a human audits.

04

STEP 02 / 05

Build the override

Staff should be able to correct or reroute AI output in one step, not a support ticket.

02

STEP 03 / 05

Sample the output

Review a fixed share of AI work every week. Errors you catch cost less than errors customers catch.

03

STEP 04 / 05

Own the error

When AI gets it wrong, the business owns it — not the employee who passed it along.

04

STEP 05 / 05

Roll out with the team

Pilot with the people who'll use it. Their objections are your risk register.

05
