

Human-in-the-Loop Map

When claims adjusters mention AI in their Glassdoor reviews, they are critical of it 98% of the time (Glassdoor research, via WIRED). The complaints were mostly about the rollout: errors relayed by the human closest to the customer. This worksheet makes sure a person always holds the keys.

STEP 1 • SORT EVERY AI TASK

A AI drafts, a human decides

Client emails, summaries, proposals. Nothing leaves without a person approving it.

B AI decides, a human audits

Tagging, routing, reminders. Low stakes, reviewed by sample every week.

Anything that fits neither is in the "nobody checks" bucket. Empty that bucket first.

STEP 2 • THE MAP

AI task	Circle one	Who decides or audits	Override path (one step)	Weekly sample	Owner
<i>Client follow-up emails</i>	<i>Draft</i>	<i>Account lead</i>	<i>Edit in inbox before send</i>	<i>All</i>	<i>Jane</i>
	Draft / Decide / Audit				
	Draft / Decide / Audit				
	Draft / Decide / Audit				
	Draft / Decide / Audit				
	Draft / Decide / Audit				
	Draft / Decide / Audit				
	Draft / Decide / Audit				
	Draft / Decide / Audit				

Finding override paths: ask whoever uses the tool daily, "What does the AI get wrong that you quietly fix?" Their answer is your first override path.

STEP 3 · WEEKLY OUTPUT-SAMPLING ROUTINE

- ☐ Same day every week: _____ Reviewer: _____
- ☐ Pull 10 items per AI task in bucket B (or every item if volume is under 10).
- ☐ For each: is it correct? Would a client notice a problem? Log any fix.
- ☐ Track the error rate. If it tops _____% two weeks in a row, move the task to bucket A.
- ☐ Errors you catch cost less than errors your customers catch.

STEP 4 · OWN THE ERROR (READ THIS TO YOUR TEAM)

"When an AI tool we chose gets something wrong, the firm owns that mistake. You will never be blamed for an AI error you flagged or passed along in good faith. If you see one, flag it here: _____. Flags help us fix the tool."

Say it before rollout, not after the first mistake. It decides whether people flag problems or quietly work around them.

STEP 5 · ROLL OUT WITH THE TEAM, NOT AT THEM

- ☐ Pilot group (the people who'll use it): _____
- ☐ Pilot length: _____ weeks. Start: _____
- ☐ Ask at the start: What part of this job do you not want AI touching?
- ☐ Ask at week 1: What does the AI get wrong that you quietly fix?
- ☐ Ask at the end: Where do you want an override? What would make you stop using it?
- ☐ Write the objections down. They are your risk register.
- ☐ Go / no-go decision on _____ by _____

RISK REGISTER
