WHAT THE FBI REPORTED

$3.05B

lost to business email compromise in 2025, across 24,768 complaints.

$30M+

reported by businesses in email compromise scams involving AI.

FBI IC3 2025 Annual Report.

It may sound exactly like them.

The FBI says AI-generated voice and video can be hard to tell from the real thing. Your team can't rely on spotting the tell.

> Write down who can approve a payment today.

VERIFY BEFORE YOU PAY

01

Set the triggers

Pick the requests that always get a check: money, bank changes, codes, passwords, and client data.

> Try this: write the list in one sentence.

VERIFY BEFORE YOU PAY

02

Call back on a known number

Hang up. Find the number in your own records, never in the message. Call and confirm.

> Try this: keep your known numbers in one shared file.

03

Add a second approver

Over your limit, two people sign off and write down the time of the call.

> Try this: pick the limit today, even a rough one.

04

Give key people a safe word

Agree on it in person. Never write it in email or chat.

> The FBI suggests a safe word for families. The idea works at work too.

VERIFY BEFORE YOU PAY

05

Make pausing safe

Tell your team: anyone can pause any request, and no one is blamed for it.

> Try this: pin the message in team chat.

Your verify rule:

- [ ] Triggers listed
- [ ] Call-back on known numbers
- [ ] Second approver
- [ ] Safe word set
- [ ] Pausing is safe
